ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a digital image accumulator in which digital image data can be opened to the public on a network by a simple operation.

SOLUTION: The digital image accumulator is constituted by having an image I/O means 5 for recording the digital image data of a first storage means 1 in a second storage means 2, a video image output means 6 for outputting the digital image data of the second storage means 2 while converting into signals suitable for a display, a means 3 for storing a sample of HTML (hypertext

markup language) data, a means 7 for generating HTML data from selected digital

image data and the HTML sample storage means 3, a means 12 performing communication through a network, a means 11 for storing the selected digital image data and data for defining the destination of the HTML data, and a means 17 for transmitting the selected digital image data and generated HTML data to the destination in the destination storage means 11.
